

MOUSEPEN^{Pro} ENHANCEMENTS

Appoint is proud to announce the release of the newest member of our product line, the MousePen *Professional*. Redesigned with the help of comments from thousands of users of the original MousePen, it incorporates new features and refinements that make it the ultimate input device for any environment.

The Shape

The new pen is smaller, better balanced and has a sleek round shape that feels great in your hand and looks like a work of art.

Improved Ball Clearance

Another refinement in the new pen is to have the ball point protrude more to insure reliable performance even when the pen held at extreme angles to the writing (working) surface.

Better Tracking.

MousePen^{Pro} now comes with two interchangeable balls allowing for reliable traction on a much wider variety of work surfaces. The installed ball is made of hard plastic and is designed to operate best on non-slick surfaces such as mouse pads, paper and even cloth. This hard plastic ball is incredibly resistant to picking up dirt, dust and lint, virtually eliminating the need for routine cleaning. The second ball included in the package is our new softer ball ("the snow tire") and provides better tracking on slick surfaces such as formica, glass and vinyl.

New Buttons

The new buttons are closer together and lower on the pen making their operation effortless. Button feedback has also been improved giving the user more positive control. Even the shape of the buttons has been changed to complement the new pen body.

Higher Resolution

The opto-mechanical components in the head of the pen have been redesigned to improve artistic applications of the pen. When using the pen for freehand drawing, artists will notice smoother diagonal lines and rounder curves and circles.

User Controlable Ballistic Gain

The *Professional's* ballistic gain has been smoothed for predictable cursor control regardless of how fast you move the pen. In addition there is now a switch on the pen to allow the user to turn on and off the pen's ballistic gain, even while inside an application program.

The New MousePen Stand

The *Professional* now comes with an attractive custom MousePen pad. This new pad combines a pen stand with a foam work area. Styled in black rubber foam and nylon, it makes an attractive desk accessory.

MousePen^{Pro}
