

nVIEW Corp. Announces Enhancements to Product Line *External Video Adapter, More Colors to Improve Products*

nVIEW Corporation's multiple source TFT (Thin Film Transistor) LCD projection panel, the *MediaPro*, will ship March 1 equipped with 262,144 color capability. Prior to this enhancement, the *MediaPro* displayed images in up to 32,768 colors. The added color capability will make the *MediaPro*'s already spectacular images even better. The *MediaPro* is a lightweight, portable LCD projection panel which can display computer as well as live video from up to four separate sources concurrently. The *MediaPro* is a cost effective, portable presentation alternative to bulky 3-beam, CRT type projectors and offers superb image quality and versatility. The *MediaPro* was awarded a "Product of the Show - Merit Award" at the Singapore Informatics trade show in December 1991. Older *MediaPro* projection panels can be upgraded to the new color capability.

nVIEW Corporation also has introduced the *nVIEW Video Adapter* which is an external accessory which allows the *ViewFrame Spectra* and *SpectraPlus* LCD projection panels to project live composite video from a single source such as a videotape player or laser disk player. The *nVIEW Video Adapter* eliminates the need for a video capture card in the computer or an expensive scan doubler to project video.

PRODUCT PRICE LIST
