twiddler™

the natural evolution of mouse and keyboard

The twiddler is a pocket-sized **mouse pointer** *plus* a full-function **keyboard** in a single unit that fits neatly in either right or left hand. It plugs into both keyboard and serial ports on IBM-compatible PC's and works with DOS or Microsoft Windows 3.0 software. Combining major innovations in pointer and keyboard technology, the twiddler is designed to bring renewed enjoyment to current computer users and to attract newcomers to the world of personal computing.

MOUSE:

The twiddler's mouse pointer is based on a new concept—a sensor, sealed inside the unit and immune to the ravages of dust and dirt. To get a feel for how it works, make a fist with your thumb on top. Now, extend your index finger; then rock your hand back and forth and tip it from side to side. If you were pressing the mouse button with your thumb, the pointer on the screen would follow the motion of your index finger! After you've tried it, you'll see how easy and natural it becomes.

KEYBOARD:

The twiddler incorporates a keyboard which is radically new—an ergonomic keypad designed for “chord” keying. This means you press one or more keys at a time. Each key combination generates a unique character or command. With 12 finger keys and 6 thumb keys, the twiddler can easily emulate the 101 keys on the standard keyboard... *plus many more*. Imagine! A pocket-sized, touch-typable unit with more power than a full-sized keyboard.

The twiddler is a truly personal mouse and keyboard that goes with you just about anywhere.

REQUIREMENTS:

IBM PC/XT/AT PS/2+ compatible computer; keyboard and serial ports, DOS 3.1 and higher.

+Requires optional PS/2 keyboard adapter.

Certified to comply with the limits for a Class B computing device pursuant to Subpart J of Part 15 of FCC Rules. Twiddler™ is a trademark of Handykey Corporation. Microsoft Windows and Logo are property of Microsoft Corporation. Patents Pending.

ADVANTAGES:

- No mouse pad, desktop, *or any surface at all* needed for operation. This mouse *flies!*
- Twiddler's sealed sensor can't be fouled by the dust and dirt that shorten the life of ordinary mice and trackballs.
- At last, *touch-type* on a pocket-sized keyboard!
- Stores within easy reach, on the side of your monitor or notebook computer.
- Can be used as an auxiliary keyboard, varying the potential stress from repetitive motions.
- Eliminates tedious switching back and forth between mouse and keyboard.
- Includes a “joystick” mode for many mouse-driven games.
- Adds the speed of keyboard text-entry to slate-PC's.
- Three year warranty.

3 REASONS TO USE THE

twiddler™

1. Performance: The twiddler has the *mobility* to move to any area on the screen in a single, swift movement of the hand. You have the *control* even to write on the screen in cursive script (a notoriously difficult task for pointing devices!) Plus, the twiddler provides the pixel-by-pixel *precision* needed for applications like CAD and Desktop Publishing.

2. Convenience: Reach out and take the twiddler from the side of your monitor where it parks out of the way against a velcro patch. Lean back in your chair and point, click, and type in a position comfortable for *you*. No mouse pad, desktop, or any surface at all is needed.

3. Reliability: The twiddler's pointer is based on a sealed sensor, *immune to dust and dirt*, that can shorten the lives of ordinary mice and trackballs. It has a full 3-year warranty.

P.S. Also touch-type at 35+ words-per-minute on the twiddler's full function keyboard!
