

UPGRADE YOUR CyKey

Get a better feel plus KeyText

The upgraded keyboard will lower the key pressure, give the CyKey a new feel which should result in fewer errors. For those who remember the excellent AgendaA keyboard it is a big move in that direction! And it will look like new!

With just 3 keystrokes, in conjunction with *KeyText, enter one out of 200 special characters or even your full address

KeyText could revolutionise the way you use your CyKey!

Foreign accented characters umlauts, cedilla, grave accents , acute accents, the most common characters from the Greek alphabet. (ü á, À, ç, z, ß etc)

Symbols such as copyright, trademark or registered design. Paragraph, double dagger or degree. (©, ™, ®, ¶, ‡, °)

Punctuation The CyKey has much of the punctuation but KeyText gives you an alternative method should you forget the CyKey codes. (e.g. \, /, ¿ ^) Note the Spanish opening question mark.

Highlight blocks of text to underline etc. **Mathematical signs** (e.g. ÷, ±) and **Oddballs** like æ Œ

Text entry of blocks of text, your address, telephone number or logo.

Form filling all those standard items telephone number etc.

Plus all the features offered by KeyText for both PC and CyKey (www.keytext.com)

~~~~~

**Question.** How is done?

**Answer.** Working with KeyText a complete set of macros (about 200) have been written and are contained in a single file that uses the clever KeyText software to translate a mnemonic into the character of choice.

~~~~~

Question. How am I going to learn 200 macros?

Answer. Some you may not need; the Nordic Slash (Ø) or a generic currency sign (₣) perhaps. However there are scores of commands and characters that you use and we have confidence that you will not have to pull down that special character menu or resort to help pages.

~~~~~

**Question.** Commands?

**Answer.** Yes you can do a range of commands some complex like save file (Alt F Alt S) and the common editing commands like page up, page down etc.

## This is how you use CyKey with KeyText

The [R] key

**1 Tap the repeat** key, it generates a special code that KeyText recognises.

In documentation **[R]** is used to signify this action.

KeyText now "listens out" for the next two characters you enter. It is these 2 characters, when preceded by **[R]**, that select a substitute character from the table.

**2 Examples to illustrate the easy mnemonics - to type " à " (a grave)**

Key **[R]**                    *(tap the repeat key)*  
Now key g                *(type "g"for grave)*  
Then key "a"            *(type "a" the accented character)*

**[R]**ga in our shorthand.

**To type À (A grave)** Type **[R]**gA (*upper-case A*).

Applies to the foreign accented characters, umlauts **[R]**ua = ä etc, tilde **[R]**ta = ã, etc.

**Punctuation** takes the prefix "p", Thus exclamation is **[R]**pe = ! e for "exclamation".

Similarly **[R]**pb = \ b for backslash etc.

**Double character** is clever tweak (mimics AgendA operation)

**[R]**db gives you two characters for the price of one; both the open and closing bracket ( ).

The cursor is placed, ready to use, between the brackets, especially useful for programmers.

In this group are all the brackets plus double quotes **[R]**dq = " " and even Spanish quotes ¿ ?

**It really is as easy as that!**

## What next?

To update your CyKey go to [www.cykey.co.uk](http://www.cykey.co.uk) click on link to Keytext page (for full information) and then click on the link to "Upgrade my CyKey" on the purchase page. Once you have ordered an update I will send a confirmation email with mailing details.

*Note Left/Right hand switch has been made easier and does not require battery removal.*

## Special offer.

**Upgrade your CyKey (it will look like new), replace the battery, load new software & refurbish the keyboard for £23 inc. VAT.**

\*KeyText needs to be purchased separately, for your PC, a real bargain at £16.95
