Gesture Recognition

- A lot of applications require accurate understanding of human gestures
 - Sign language reading and dancing
- Some tasks may require the detailed sequence of the gesture action
 - Kinect Sports
- We tackle the problem of gesture recognition + alignment

Xbox Kinect Pipeline: Skeleton Correction & Alignment

Depth
Image

Background
Removal

Skeleton
Extraction

Skeleton
Correction &
Alignment

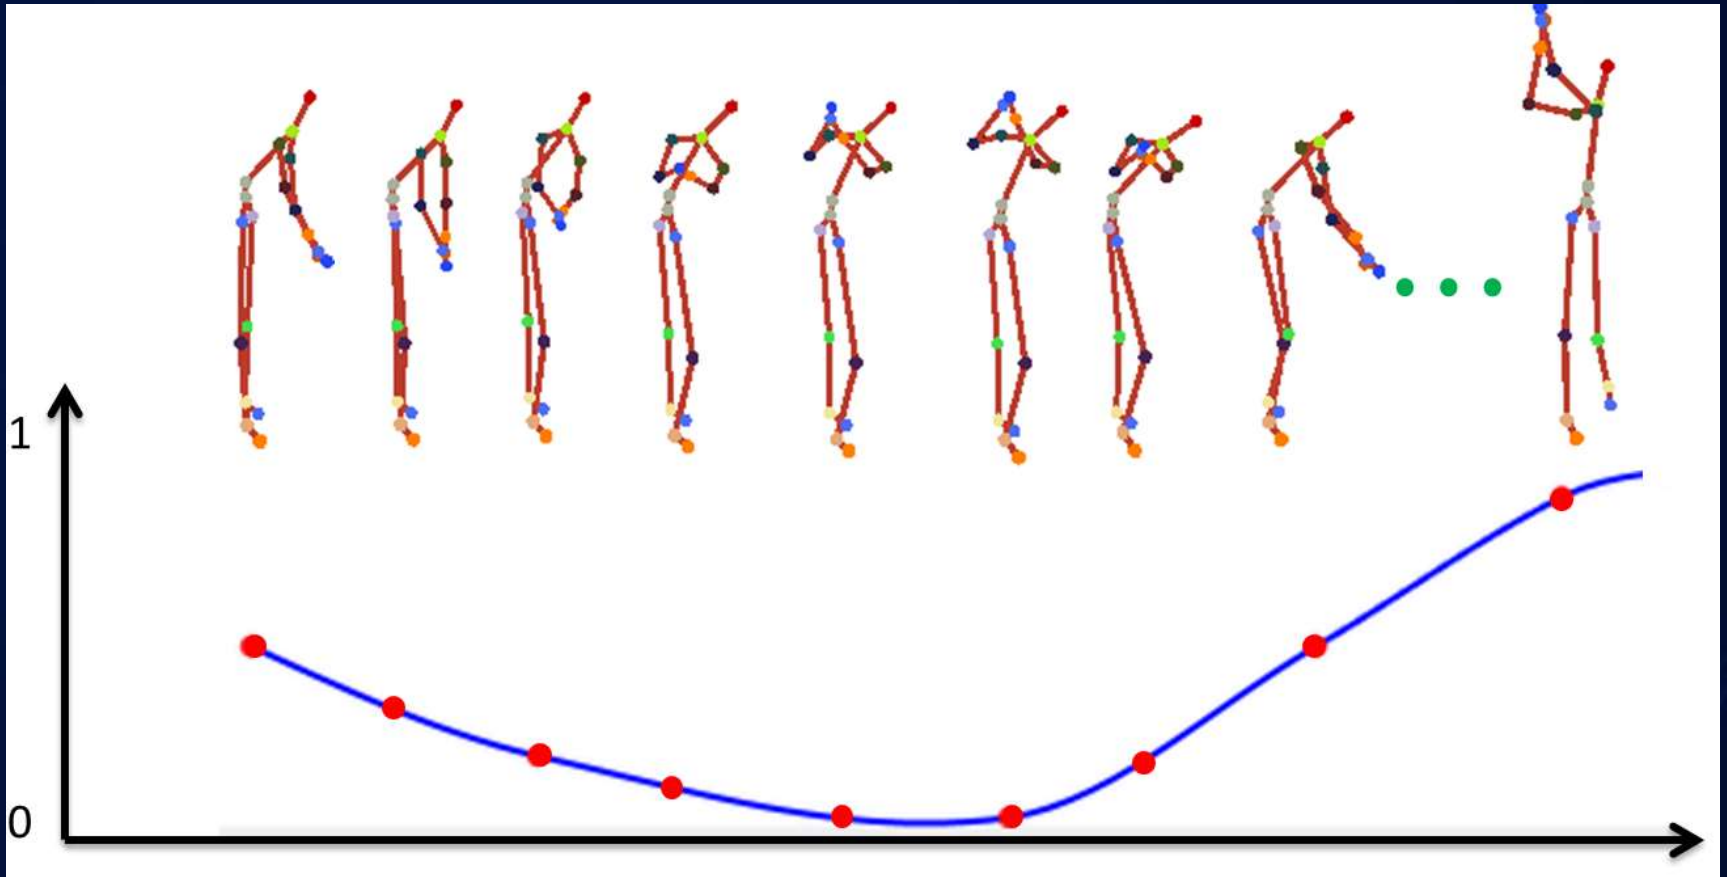

Skeleton/Gesture Recognition

Two key observations:

- (1) There are systematic errors which enable us to learn alignment function for the correction.
- (2) The alignments are nonlinear and non-deterministic.

Skeleton/Gesture Alignment

- The skeletons are aligned w/ numerical values
- The numerical values are used to drive the avatar

A Hidden Markov Model

Aligned
Values

Input
Skeletons

Output Distribution Model

- Random forests
 - A collection of decision trees
 - Like mixture distribution to model player variation
 - Ensemble learning (voting) for robustness
- Decision tree
 - Leaf nodes model different poses

Research Updates

Multimedia

- Head Scanning
- Hair Modeling

Kinect Based 3D Face Avatar

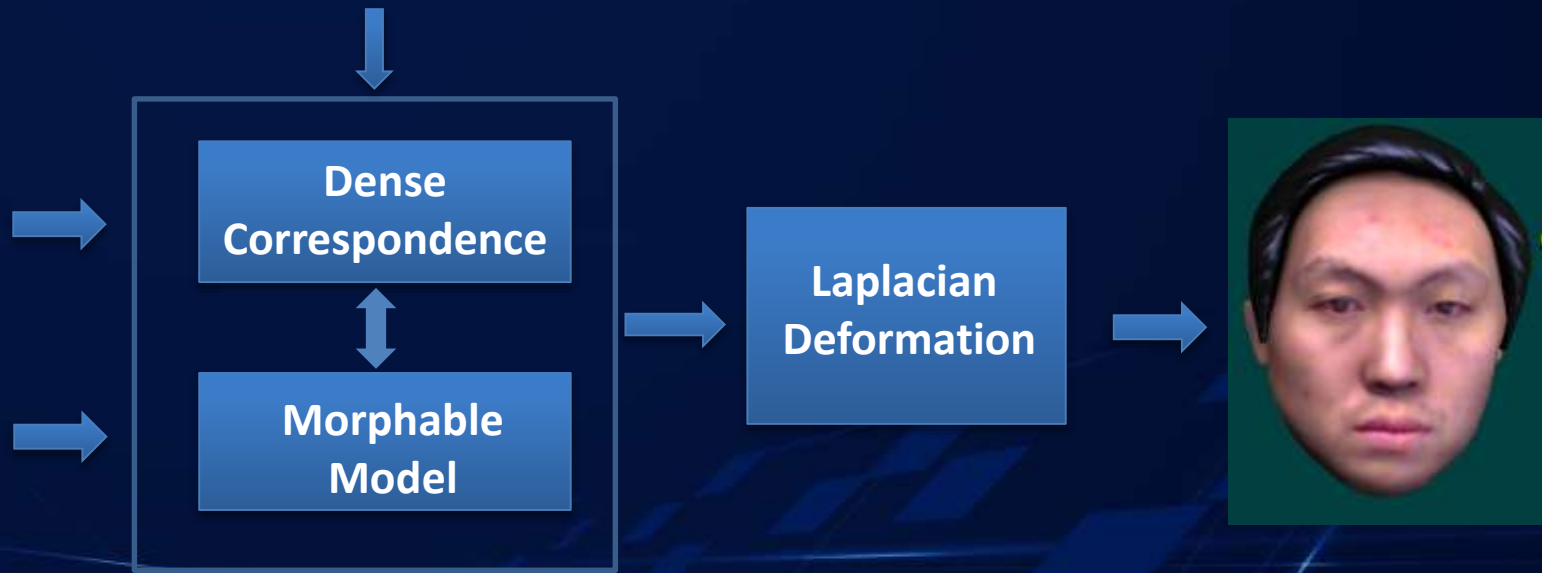

3D face avatar based on Kinect input

- Simple capture – 3 shots
- Good results & robust for different people
- Depth – provide 3D shape of face, but noisy
 - modeling overall shape and nose
 - robust alignment and pose estimation against face model
- RGB
 - For texture details (skin color)
 - For modeling feature regions (mouth, eye)
 - Could use high-resolution RGB face shot from cameras

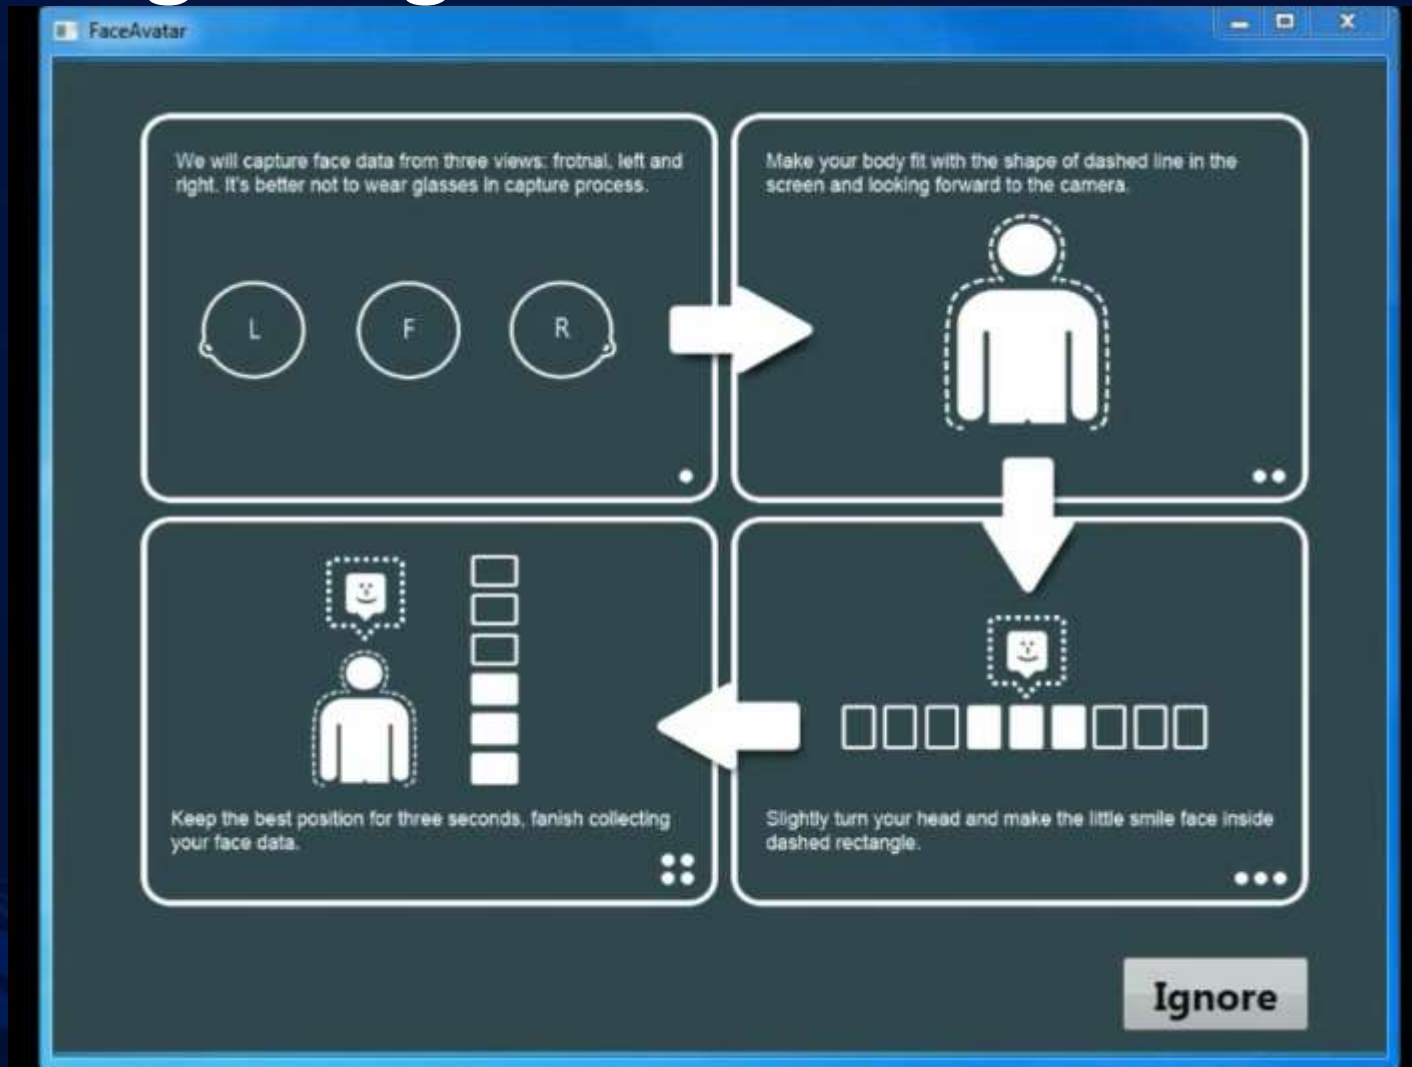

Kinect Based 3D Avatar

3D Face Priors

Kinect Based 3D Face Avatar (Fang Yang will give me new one on Sat.)

Hair in Real World

- Important appearance feature
- A lot of (~100k) thin fibers
- Diverse hairstyles
- Complex interaction and dynamics

Hair in Graphics

- Important applications
- Manual modeling is difficult
- Capturing is difficult too
- Impractical for normal users

Goal: 3D Hair from Single Image

Single portrait image

3D hair model

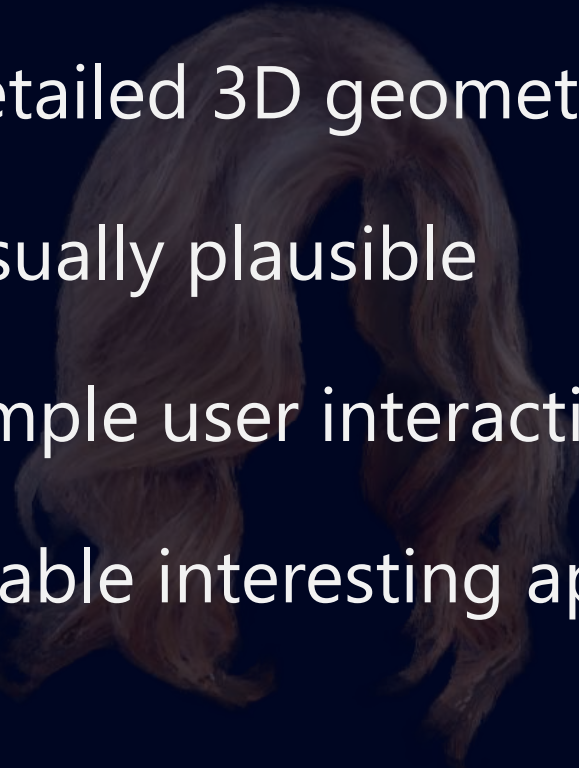

Goal: 3D Hair from Single Image

Single portrait image

- Detailed 3D geometry
- Visually plausible
- Simple user interaction
- Enable interesting apps

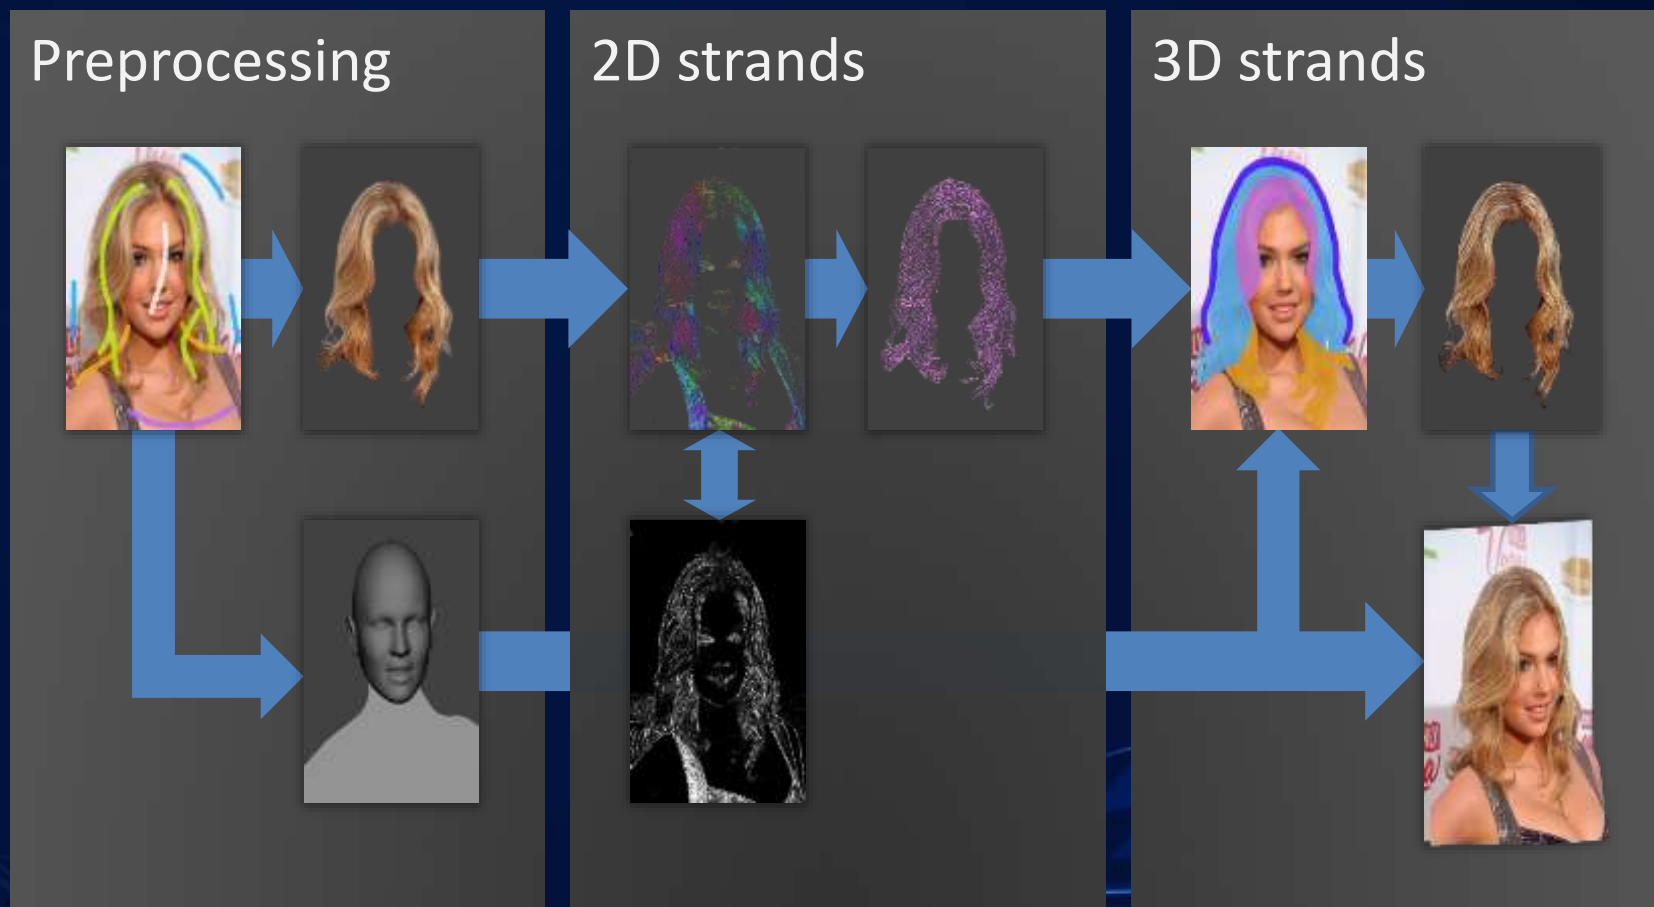

Result

Single portrait image
+ user strokes

Algorithm

Strand Tracing

3D Strands: depth estimation

Initial depth

Our Solution

- Salient object detection
 - Check if an image contains a salient object
 - Discover the position of the object

Original Images

Salient Object Detection

Non-object

bounding box of salient object

Our Solution

- Salient object detection
 - Check if an image contains object
 - Discover the position of the object
- Learn to naming colors + context-aware color naming

Dominant Color Naming

Our Solution

- Salient object detection
 - Check if an image contains object
 - Discover the position of the object
- Learn to naming colors + context-aware color naming
- Textual adjustment
 - Promote images whose surrounding texts contain the color name (e.g., red,...)

Be Obama
 Go to the Obama family's blog.
 Source: *Photograph under: blog*
 Source: *Michael Obama Obama First Lady Michelle Obama White and Sasha Obama*
Official Site: First Dog of the United States
Web: Go web site to the First of 2009 in Texas
First Dog at the White House: April 18, 2009
Address: Playing on the White House lawn and going on walks with the Obama family.
Best on First Dog: First Dog's life through Instagram
Favorite activities: Running and then napping near the Obama girls.
Favorite food: Tiramisu - on fish.
Did you know?
 - Be a better owner than just different photos. Be Obama's family's relationship with "Michelle" and Sasha and Barack's personal life is all covered in - and another fun-themed Tumblr.
 - Be sure to get to the Obama family's favorite food Kennedy and the wife, too.
 - Even though Be is a *Photograph under: blog*, the *Obama's Home & Garden*.

A problem with filtered results

The results are not always attractive!

Relevance \neq Clipart Relevance

- Ranking should be based on the relevance to *query and clipart style*, not only the query
- Observation - Good clipart images often contain “clipart” or “cartoon” keywords
- Solution: visual filter + clipart specific text ranker

Example

crab

keyword: crab
Visual attribute: clipart

keyword: crab

keyword: crab, clipart
Visual attribute : clipart

Visual filter only

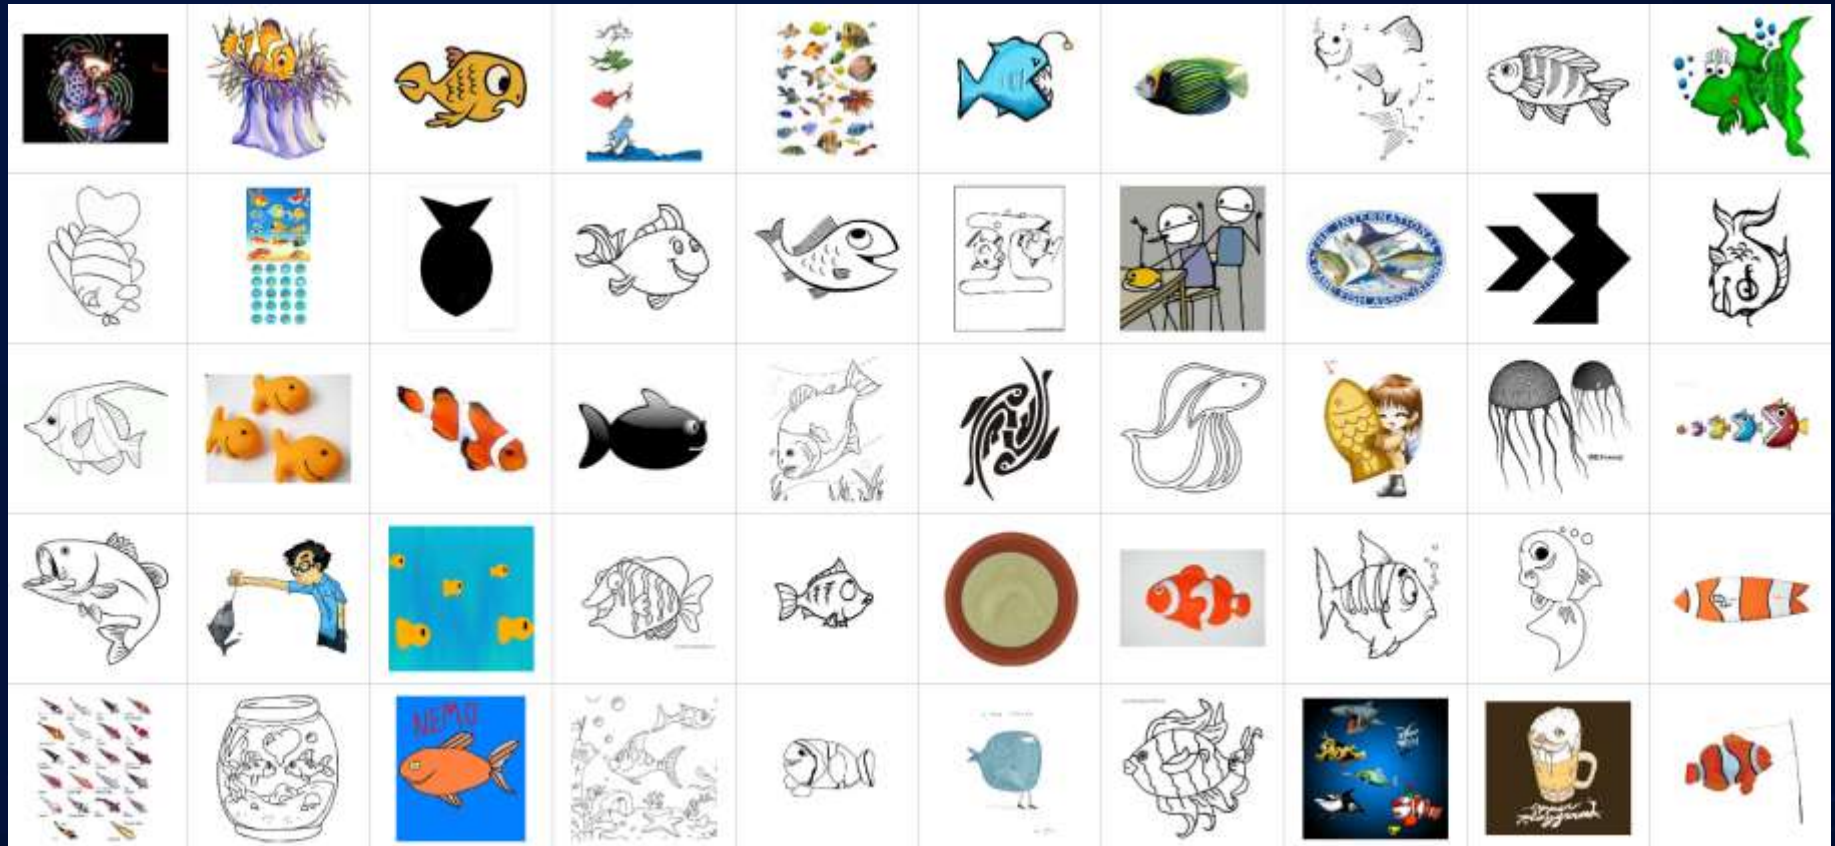

Visual + Text

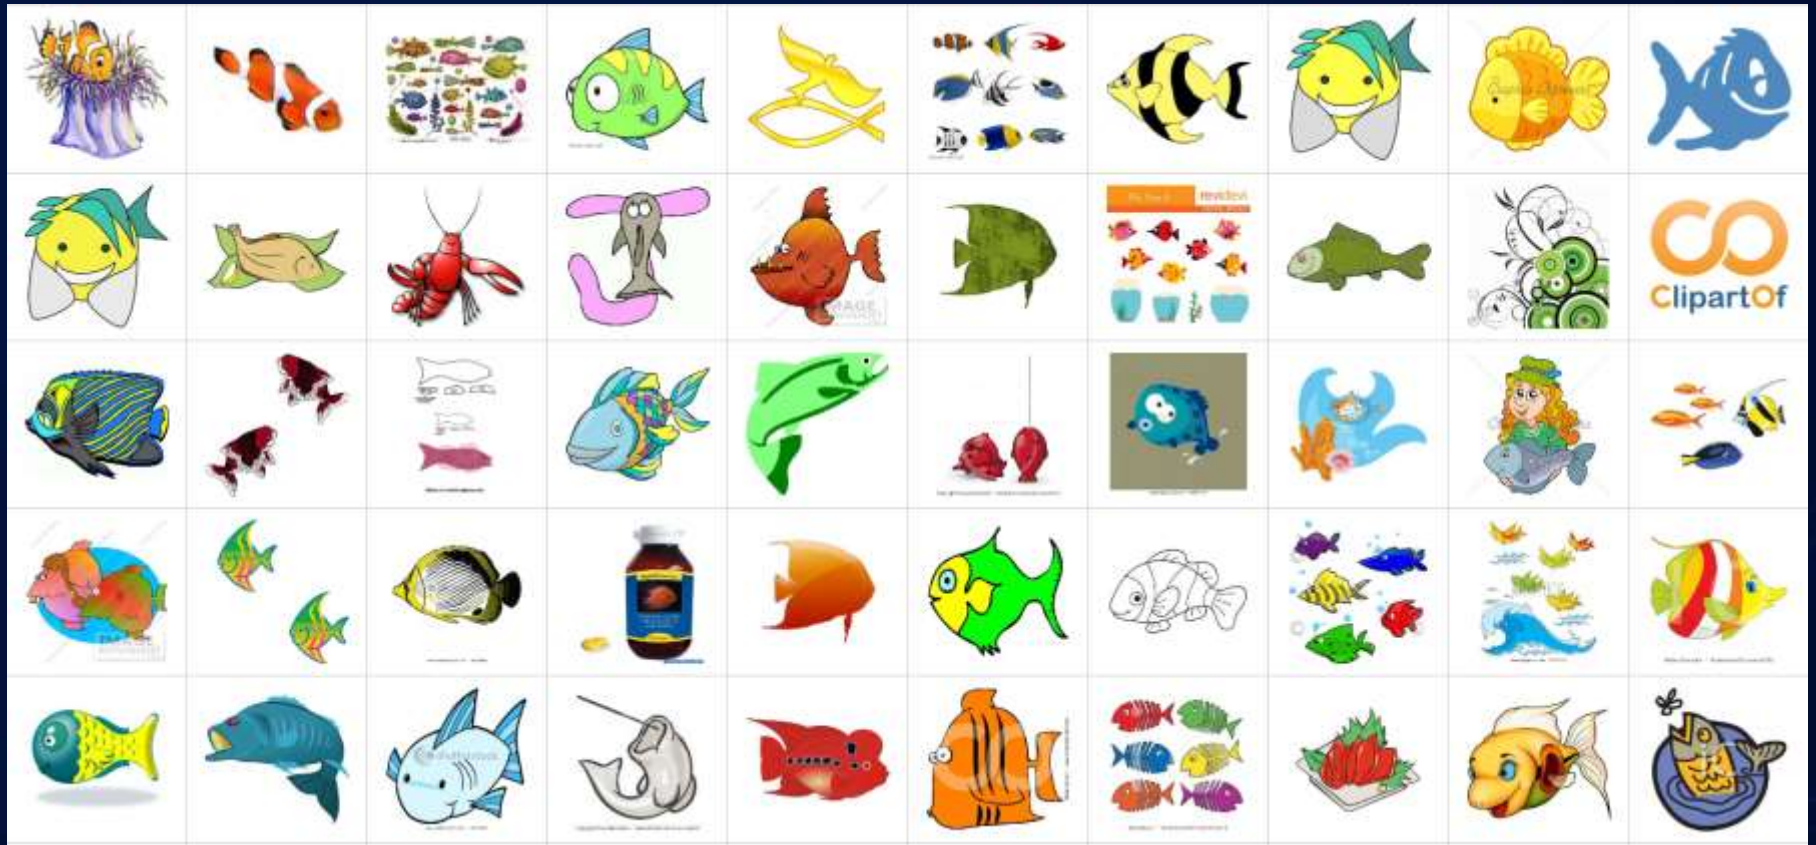

Results without Clipart Specific Text Ranker

fish

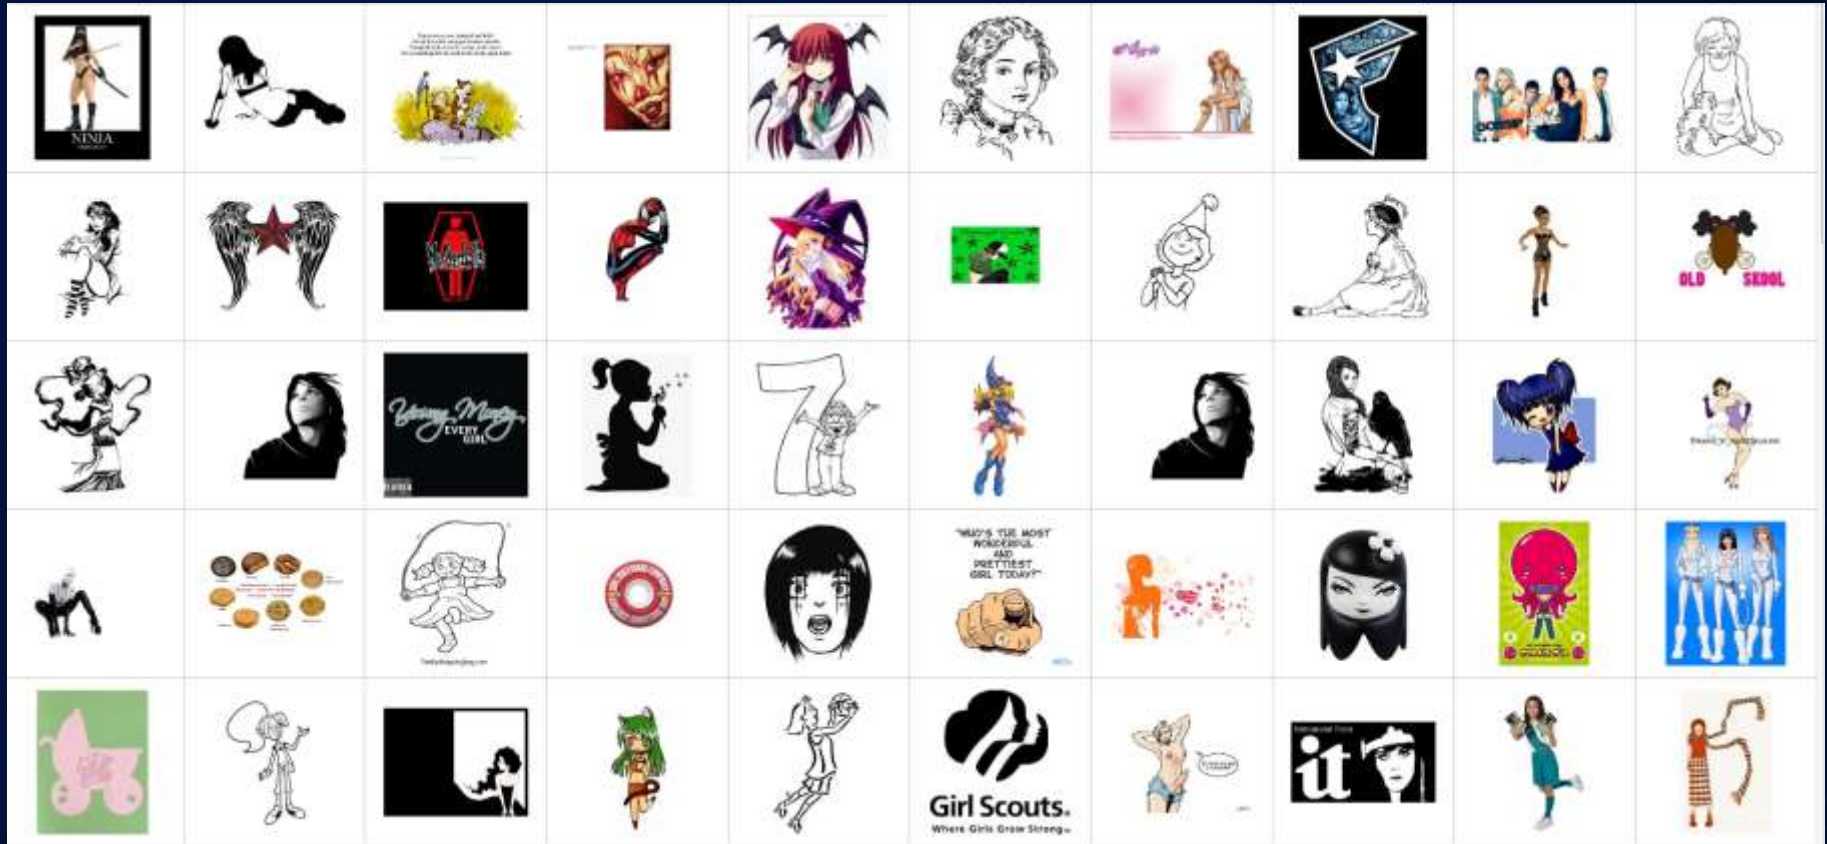

Results with Clipart Specific Text Ranker

Attribute based Visual Quality Improvement

Motivation

- Visual quality is important for user experience

Existing System

Text based information (text metawords):

- Word hit number
- Phrase exactly match number
- Static rank
- BM25
- ...

Problem:

Only used text information, can not consider visual quality

Integrate Visual Features

Low-level visual features

Hardly directly combine with text metawords

● : text metawords

Integrate Visual Features

Route Construction from Uncertain Trajectories

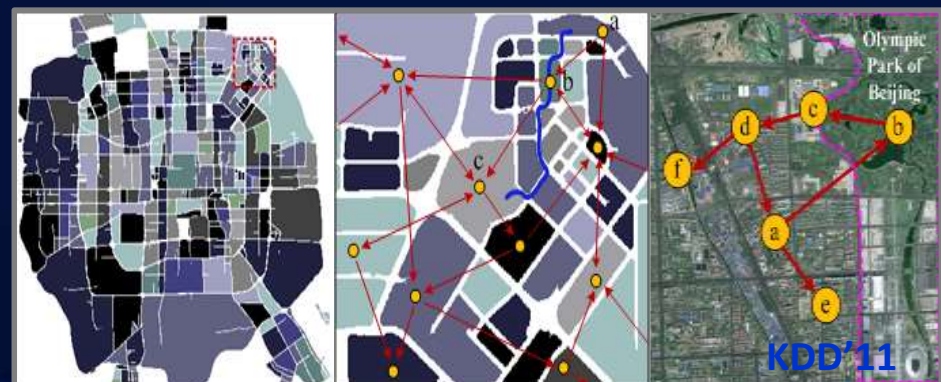

Finding Smart Driving Directions

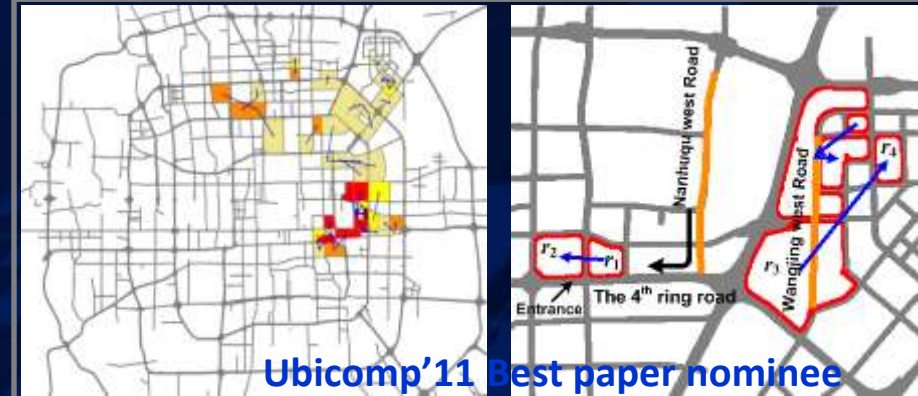

Discovery of Functional Regions

Passengers-Cabbie Recommender system

Anomalous Events Detection

Urban Computing for Urban Planning

Discover Regions of Different Functions using Human Mobility and POIs

Goals

- Discover regions of different functions in urban areas
- Identify the kernel density of a functionality

Functional Regions

Applications

- Calibrating urban planning
- Business planning
- Advertising

Motivation and Challenges

- POIs indicate the function

- But not enough

- Compound
- Quality

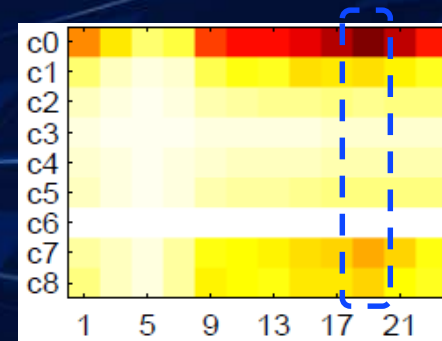

- Human mobility

- Differentiate between POIs of the same category
- Indicates the function of a region

Leaving

Arrival

Methodology Overview

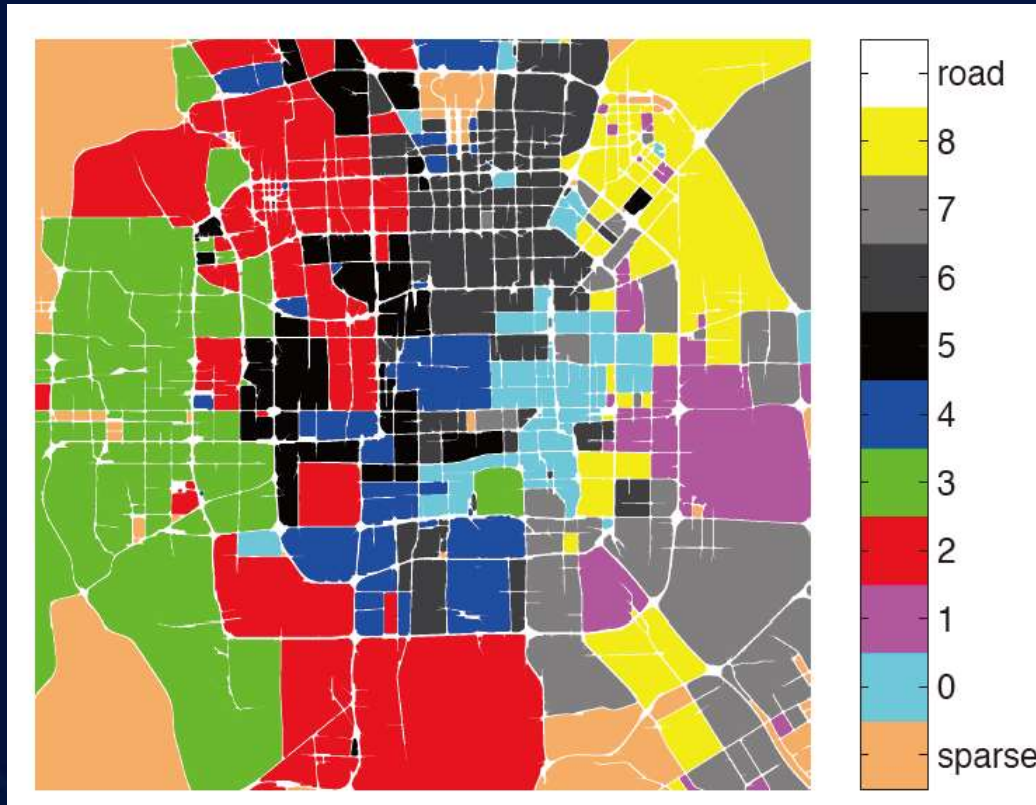

- Mapping from regions to documents
 - Regions \rightarrow Documents (R)
 - Functions \rightarrow Topics (K)
 - Mobility patterns \rightarrow Words (N)
 - POIs \rightarrow meta data like keywords and authors
- LDA(Latent Dirichlet Allocation)-variant topic model

Territory Identification

- Region aggregation
 - Cluster regions according to topic distributions
 - Aggregate individual regions into big territories

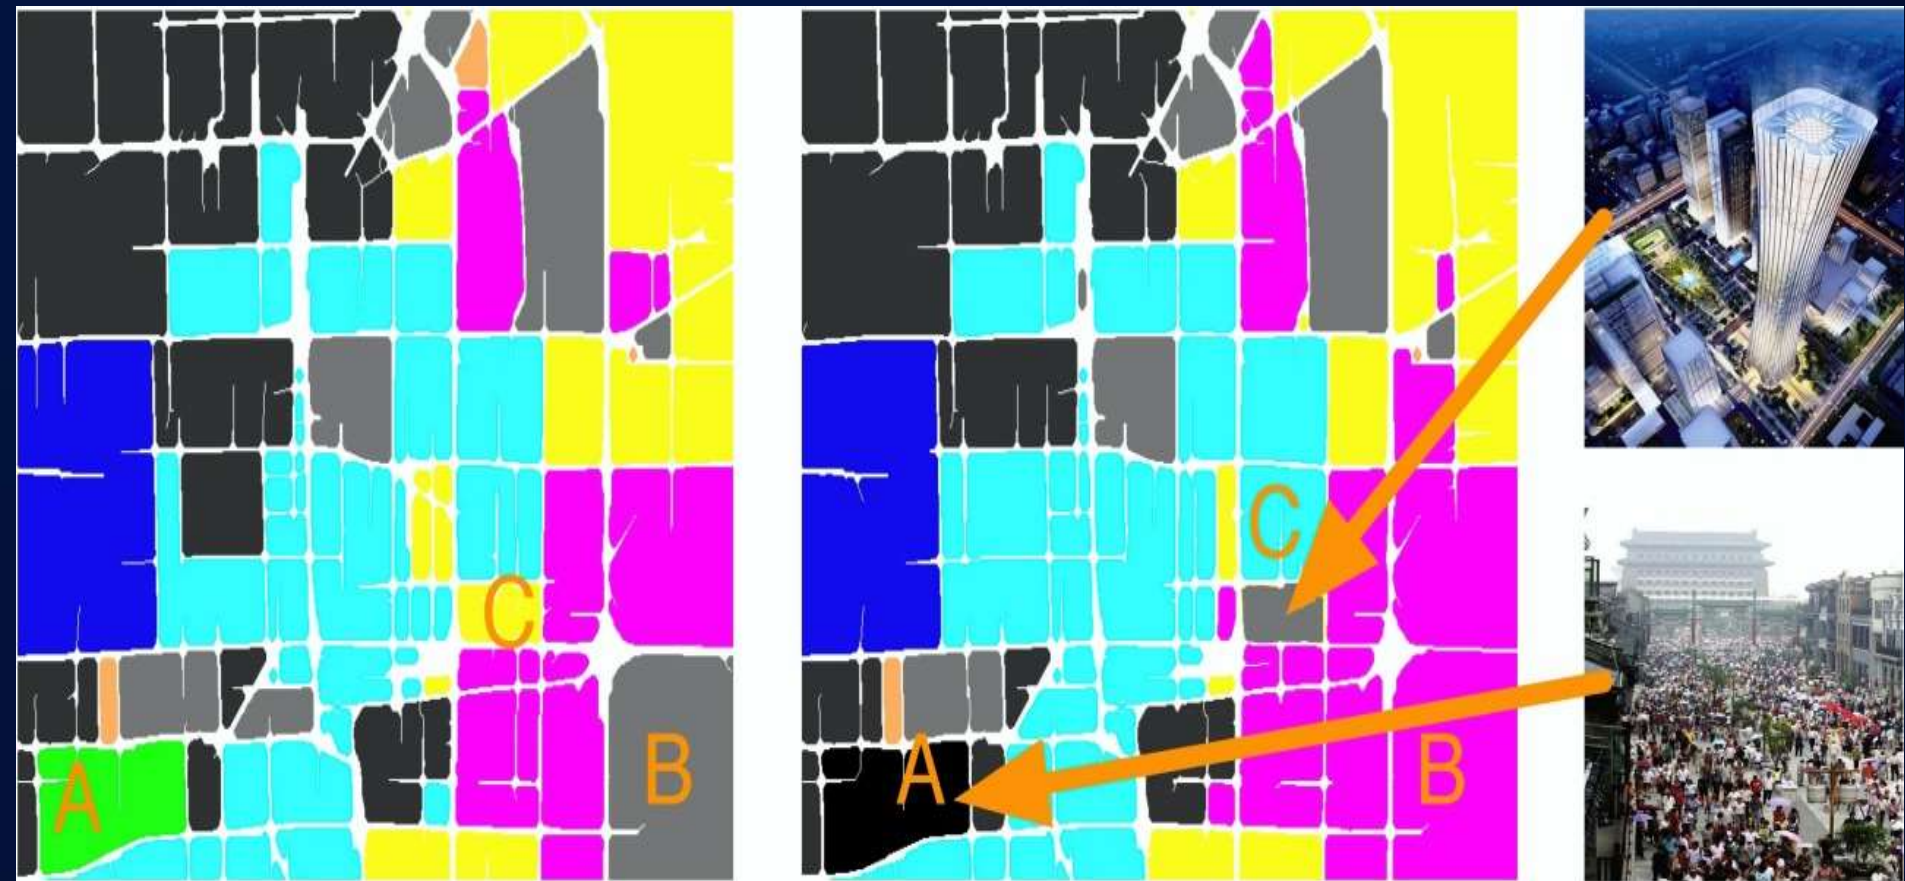

Annotation of Territories

Evaluation

2010

2011

Research Updates

CS Fundamentals

- Theory papers in SODA, STOC, FOCS, WINE, ...

- **BSGP – High-level GPU programming language**
- **Indoor Navigation**

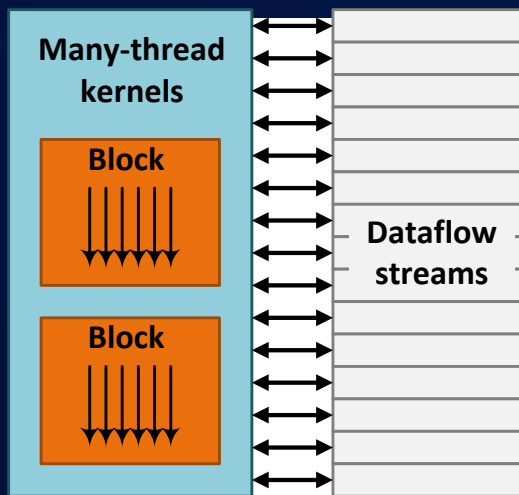

BSGP: Bulk-Synchronous GPU Programming

- High-level programming language
 - Hardware independent
 - Easy to write and maintain
 - Well optimized
- Easy to debug

GPUs vs. Programmers

GPU architecture:
stream/kernel

Programmer:
data structure/algorithm

Low level programming:
Direct-compute, CUDA,
OpenCL, AMP ...

High level programming:

BSGP !

Bulk Synchronous Parallel (BSP)

- First proposed by Leslie G. Valiant (1990)
 - A bridging model for parallel computation
- First CPU implementation by Bill McColl (1997)
 - BSPLib: The BSP Programming Library
- Challenges on GPUs
 - Many-thread computational model on GPUs because of the stream-kernel architecture

Research on BSGP (2007~now)

- Compiler (ACM TOG 2008)
 - BSGP: Bulk-Synchronous GPU Programming
- Debugger (ACM TOG 2009)
 - Debugging GPU Stream Programs Through Automatic Dataflow Recording and Visualization
- Applications on GPUs (ACM TOG 2008~2012)
 - KD-tree construction
 - Micropolygon ray tracing
 - Hair modeling and rendering
 - ...

Eating Our Own Dog Food (2007~now)

- 20+ new GPU algorithms
 - First KD-tree/Octree construction on GPUs
 - Neural network training
 - Optimization
- System
 - RenderAnts
 - About 50,000 lines of BSGP code, and compiled into about 2,000 CUDA kernels.

Contribution to Community

- BSGP download

- Research.microsoft.com download site

Fast Bootstrapping of Indoor Localization Services

Motivation

- Growing demand for fine-grained indoor localization
 - Indoor navigation
 - Mobile advertising
 - Mobile social network
 - ...

Overall System Architecture

Few indoor localization systems actually deployed!

Key Problem

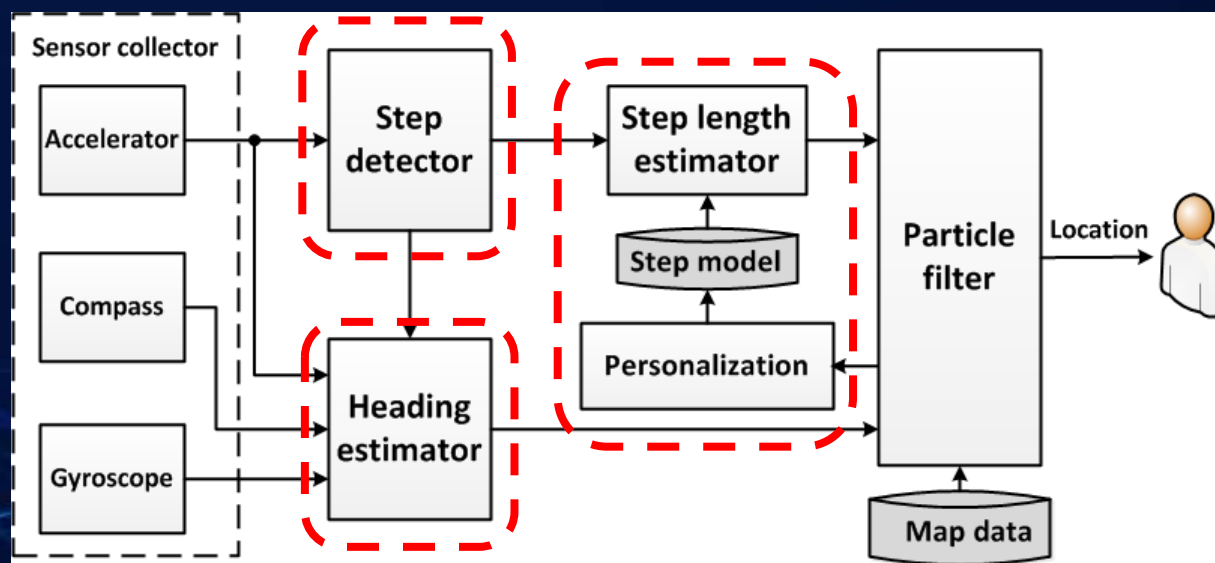

- How to efficiently build and maintain the location database?
- Challenges:
 - Data collection: high user involvement
 - Offline processing: noisy or bad data
 - Database maintenance: frequent environment change

Taxonomy of Data Collection Methods

- Supervised: Tap&Hold
 - Manually locate oneself on map and collect WiFi fingerprint for that spot
- Unsupervised: Walking-based
 - Walking with a survey plan
 - ▶ For vendors, may tapping at landmarks (e.g., turns)
 - ▶ Good for initial data collection
 - Freestyle walking
 - ▶ For ordinary users in their normal use
 - ▶ Good for database maintenance, via crowdsourcing

Enabling Walking-based Collection

- Inertial sensor based Dead-Reckoning
 - Robust step detector
 - Robust heading estimator
 - Accurate, personalized step length model

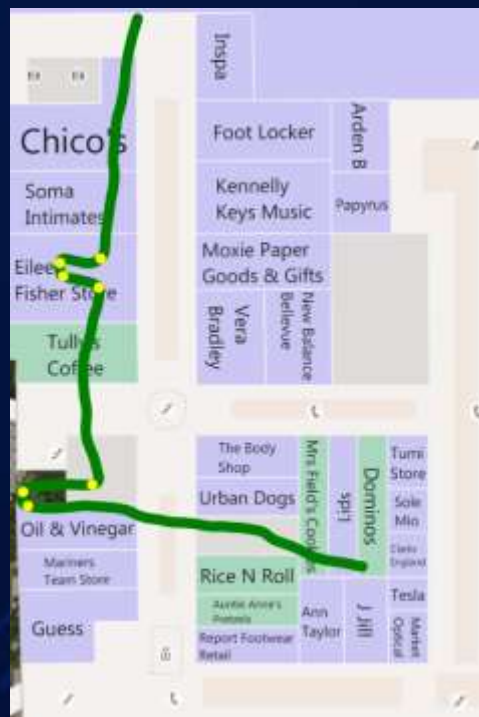

Walking with a Survey Plan

- Problem: Noisy sensor data
- Solution: Robust turn detection algorithm

Survey plan

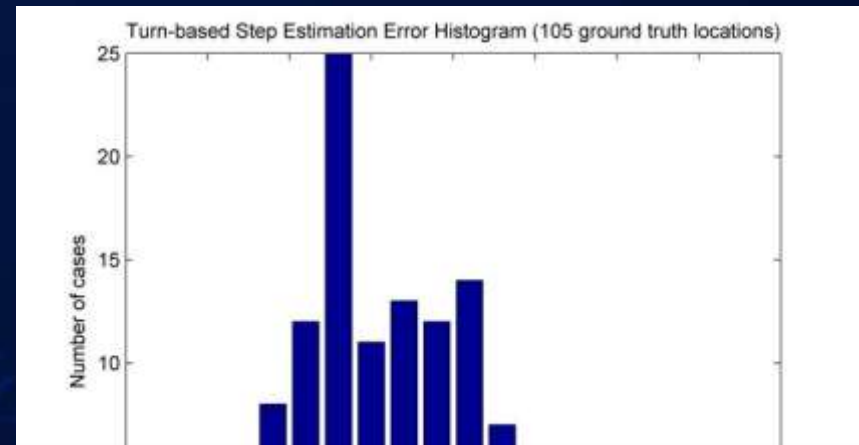

Raw sensor data

Rectified results

Accuracy of Turn Detection

Path/Trace list	# of Effective turns	# of Detected turns	Detected Turn Position Error (mean / min / max) (seconds)
1 st	18	18	1.07 , 0.25, 2.24 (seconds)
2 nd	9	9	1.17 , 0.22, 2.38 (seconds)
3 rd	9	9	1.23 , 0.41, 2.50 (seconds)
4 th	4	4	0.91 , 0.58, 2.40 (seconds)

Average step position error: 1.1 m

Comparing Data Collection Methods: End-to-End Evaluation

- Training datasets
 - Tap & hold
 - ▶ 45 points in 35 minutes
 - Walking
 - ▶ 1809 points in 35 minutes
- Test data set
 - 3288 points

End-to-end Evaluation*

Plain walking outperforms Tap&Hold,
with much less user effort and much higher data yield.

Data Collection with Freestyle Walking

● Challenges

- Unplanned paths: requiring path detection
- Phone usage diversity: error-prone DR results

● Solutions:

- Trace-back via backward propagation in PF
- Location refinement via overall trace rectification
 - ▶ Match traces to map, by landmarks (e.g., turns)

An Illustrative Example

- ★ Actual start/end point
- ★ Tracked start/end point
- Ground truth walking path
- Forward tracked traces
- - Backward tracked traces

Accuracy under Freestyle Walking

Conclusion

- MSRA follows the same missions after 14 yrs
 - Advance the state of the art
- We are expanding our research areas
 - Systems & networking, HCI, Haptics,...
- We love to collaborate with you as usual
 - Please visit us often & give us feedback
- Let's work together

THANK YOU
