Do Video Games Equal Less Crime?

That's one theory for the continuing fall in crime, despite the recession.

Gamers Finally Get Their Wheaties Box ...sort of

Dr Pepper is featuring the Halo 3 player Tom Taylor, who goes by Tsquared, on the labels, which will appear on about 175 million 20-ounce bottles from January to April.

Sony To Shut its SF Metreon PlayStation store

Sony is closing down its one-and-only U.S. PlayStation store at the Metreon mall in San Francisco. The recession is clearly to blame, but it's happening at time when Microsoft - which opened and shut its own Microsoft store at the Metreon - is going to open a chain of its own stores.

Microsoft Takes on Cable With Xbox Streaming Video

If talks with Disney work out, the game console could stream ESPN content, making it that much easier to watch TV without cable.

Some Video Gamers Leery of Obama's Views

Gamers are worried that the president-elect's positions on video games may signal new regulations or restrictions on the industry.

RePriv Summary

- Existing solutions require privacy sacrifice
- RePriv is a browser-based solution
 - User retains control of personal information
 - High-quality information mined from browser use
 - General-purpose mining useful & performant
 - Flexibility with rigorous guarantees of privacy
- Personalized content & privacy can coexist

1. Introduction

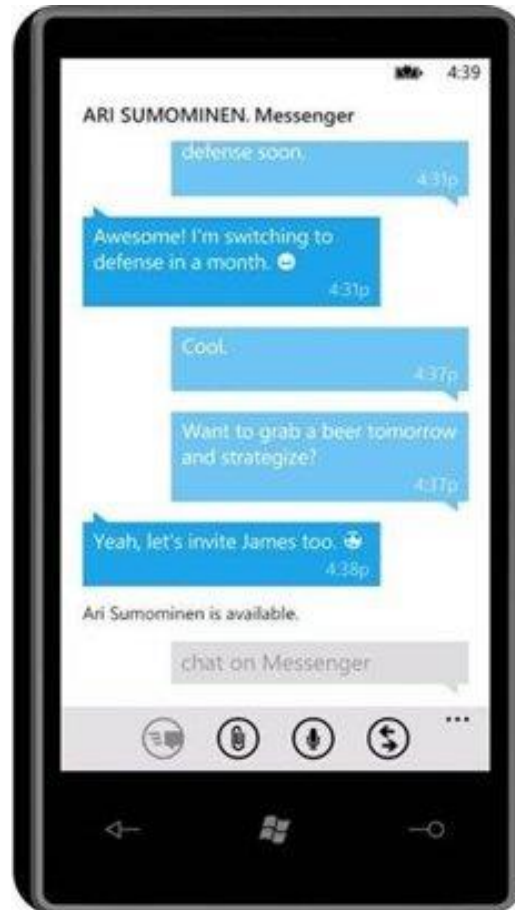

The motivation of this work comes from the observation that in today's web there are two distinct groups, users and service providers such as Amazon, Google, Microsoft, Facebook and the like. Service providers are interested in learning as much about their users as they can so that they can better target their ads or provide personalization. Users might welcome content that is personalized as long as it does not compromise their privacy. In today's web, for service providers, personalization opportunities are limited. Even if sites like Amazon sometimes require authentication, service providers can gather much about the user as can be gathered from a user's browser. A user might only spend a few minutes on a site. A user might only spend a few minutes on a site. A user might only spend a few minutes on a site.

For example, this is minuscule compared to the amount of information a browser user spends much more time on a site. A user might only spend a few minutes on a site. A user might only spend a few minutes on a site. A user might only spend a few minutes on a site.

1. Let the browser know which forms the basis of the user's history based on the user's browser history.
2. Let the browser know which forms the basis of the user's history based on the user's browser history.

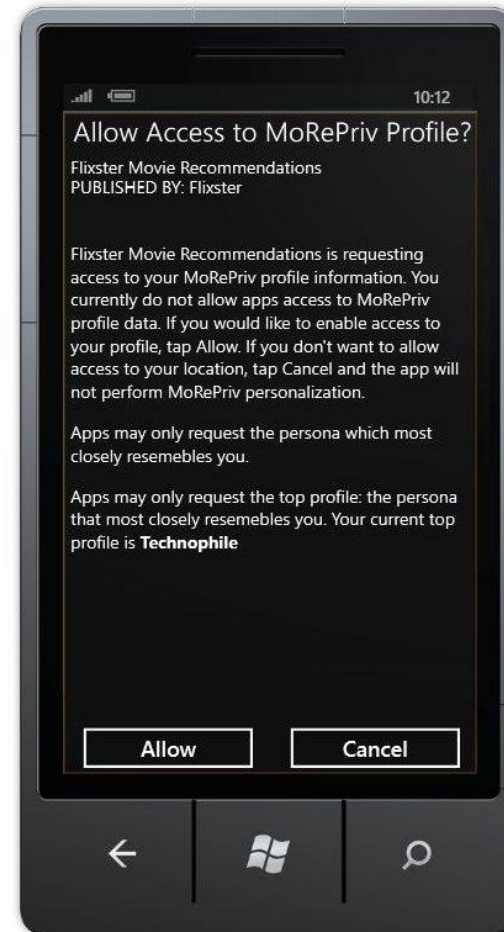

Powerful Insight About User on Mobile

Analogy: Location Access

- Location/GPS access has changed mobile apps as we know them today
- Location APIs are widely used by 3rd-party apps
- Want to do the same for persona data

Profiling the User on the Device

- MoRePriv was built into WP 7.5:
 - Persona mining
 - Universal personalization
 - Persona APIs for apps

Microsoft to Add 'Tracking Protection' to Web Browser

By NICK WINGFIELD AND JENNIFER VALENTINO-DEVRIES

Microsoft Corp. says it will revive a powerful privacy feature in Internet Explorer similar to one it dropped from an earlier version of the Web browser because of concerns about alienating advertisers.

The software giant said the next version of its browser, Internet Explorer 9, will allow users to stop certain websites and tracking companies from gathering information about them.

Users will be able to subscribe to something called "tracking protection lists"—lists of the Web addresses used by tracking companies. Internet Explorer would then automatically block those companies from the user's computer.

Journal Community
The Wall Street Journal reported in a front-page article earlier this year that Microsoft removed similar features from Internet Explorer 8 after online advertisers expressed concerns about the impact on their business.

Microsoft's move Tuesday drew applause from regulators and privacy groups, but was criticized by the trade group for the \$23 billion online-ad industry which relies on tracking to target ads to people.

The Federal Trade Commission last week released a report calling for a "do not track" system that would allow people to send a message through their Web browsers alerting tracking companies that they don't wish to be tracked.

Microsoft said its coming tool is potentially more powerful than a do-not-track system that relies on companies to comply with a user's request. "This path is different in that it actually blocks the tracking now," said Dean Hachamovitch, Microsoft's vice president in charge of Internet Explorer development. He added the two types of blocking could "happily both coexist."

FTC Chairman Jon Leibowitz applauded Microsoft's move and called on other makers of Web browsing software to offer similar features.

The Federal Trade Commission last week released a report calling for a "do not track" system that would allow people to send a message through their Web browsers alerting tracking companies that they don't wish to be tracked.

Generic excerpt

Microsoft said its coming tool is potentially more powerful than a do-not-track system that relies on companies to comply with a user's request. "This path is different in that it actually blocks the tracking now," said Dean Hachamovitch, Microsoft's vice president in charge of Internet Explorer development. He added the two types of blocking could "happily both coexist."

FTC Chairman Jon Leibowitz applauded Microsoft's move and called on other makers of Web browsing software to offer similar features.

For a "business professional"

Microsoft said its coming tool is potentially more powerful than a do-not-track system that relies on companies to comply with a user's request. "This path is different in that it actually blocks the tracking now," said Dean Hachamovitch, Microsoft's vice president in charge of Internet Explorer development. He added the two types of blocking could "happily both coexist."

FTC Chairman Jon Leibowitz applauded Microsoft's move and called on other makers of Web browsing software to offer similar features.

MoRePriv Summary

- Profile users on the device itself
- MoRePriv uses personas to represent user
 - Allow for personalization
 - Can be as ubiquitous as location info is now
 - Leaking personas is not such a big deal
- Personalized content & privacy can coexist

MoRePriv: Mobile OS Support for Application Personalization and Privacy
Benjamin Livshits
Microsoft Research

Drew Davidson, Matt Fredrikson
University of Wisconsin-Madison

ABSTRACT

This paper advocates for operating system support for personalization and describes MoRePriv, an operating system. The approach presented in this paper combines frequently conflicting goals of privacy and content allocation on mobile devices. We argue that personalization should be provided by the OS instead of applications. To enable easy application personalization, MoRePriv supports user interests, such as technology or business, and how always-on user interests are presented. We discuss the challenges of personalization about the user's privacy, such as Facebook's privacy protection, and discuss a coarse-grained, user-defined, OS-level privacy protection. We
