Machine Learning for Interactive Systems: Practical Challenges and Opportunities

Ashish Kapoor Jason Williams
Dan Bohus Lihong Li
Ece Karmar

Microsoft Research

Beyond prediction

ML for interactive systems

Machine learning

- Reinforcement learning
- Multi-armed bandits
- Active learning
- ...

Challenges

- Non-IID nature of data
- Exploration vs. exploitation
- Offline evaluation
- ...

Interactive systems

- Robotics & control
- Computer game playing
- Human-machine interaction
- Conversational systems
- Intelligent assistive agents
- Autonomic computing
- Adaptive medical treatment
- Education
- Smart homes
- Online services (search, advertising, recommendation)

• ...

The session
