TouchDevelop (touchdevelop.com) is...

- a simple statically-typed safe programming language
- a browser-based IDE, implemented in TypeScript
- a set of high-level APIs for sensors, data, services, ...
- a cloud of programmers, scripts, users, data, bugs, ...

Three challenges

1. Youth of today = programmers of tomorrow
2. Transforming data into interaction
3. Abstractions for distributed state

1. Youth of today = programmers of tomorrow

- First computers are touch-first devices (phone, tablet)
- Can we enable youth to program on such devices?

2. Transforming data into interaction

- How can we make it easy to create data-centric user interfaces on devices?
- Live programming [PLDI 2013]
 - model-view-controller supported by language abstractions

Paradigm Shift

Single computer to (cloud) clusters + mobile

Kindle for PC
Read more than 700,000* Kindle books on your computer

Kindle for Mac
Read more than 700,000* Kindle books on your computer

Kindle for iPhone
Read more than 700,000* Kindle books on your iPhone or iPod touch with our free Kindle for iPhone app. Like all Kindle apps, Kindle for iPhone includes Whispersync technology, which automatically synchronizes your last page read, bookmarks, notes and highlights across your Kindle and Kindle-compatible devices including PC, Mac, iPhone, BlackBerry, and Android phones.

Kindle for iPad
Read more than 700,000* Kindle books on your iPad with our free Kindle for iPad app. Like all Kindle apps, Kindle for iPad includes Whispersync technology, which automatically synchronizes your last page read, bookmarks, notes and highlights across your Kindle and Kindle-compatible devices including PC, Mac, iPhone, BlackBerry, and Android phones.

3. Abstractions for distributed state

sharing data in the cloud makes apps more social, fun, and convenient.

But what about disconnection, synchronization, consistency?

just tag your data as 'cloud', we synchronize and merge

The research

- How to formalize the consistency model?
- How to visualize and implement consistency?
- How to write programs for this model?

Eventually Consistent Transactions (ECT)

An abstract consistency model [ESOP '12]

Revision Consistency

An implementation technique reminiscent of source control systems [ESOP '11,'12]

Cloud Types

Defining Structured EC Data [ECOOP '12]

Other challenges, current research...

plug-ins for cloud development

mining data to help new users learn programming,
clone detection, analyze small incremental changes, gamification

leverage structured program code repository

better version control (diff, merge), real-time group editing

current research focus

automatic code splitting for distributed execution (mobile vs. cloud),
direct editing of JavaScript or TypeScript, debugger

Summary

touchdevelop is popular

260,000+ app downloads, 80,000+ registered users, 23,000+ published scripts

embraces new reality

language and editor designed with mobile and touchscreen in mind

sharing and learning with friends in the cloud

runs on Windows Phone, PC, Mac, iPad, iPhone, Android, ...

great for teaching/learning, new research opportunities

mobile devices enable and require new approaches to software development
