Why does this matter?

Formation of new products, ventures, and professionals

*With crowdfunding, it's the gamer that decides which projects they want to do, and that's a big deal for us because we never had a say in it before...it's usually **the big guys with billions of dollars that make all of the decisions for us...***

Communication technology changes who, how, & when we ask

Approval linked to Monetary Contribution

*“Now there's actually **real hard numbers** showing interest.”*

Get approval with low risk

"I have no idea if people will want [my product]. So like if people don't want to buy it, and they don't like it . . . there won't be any. Then I won't have made them. . . . It's just an incredible way to take a risk and it's a totally safe risk to take."

Expand awareness of work

“We didn’t even really care if we got money because [our product] is such an insanely low cost thing to run. So, we ended up just doing crowdfunding in order to get [our product] out.”

App Designer

Ideas to improve design

“I had to put some of my designs on the web before but it was always for smaller design communities, but this was **much larger reach** ... a few people offered specific design comments... **an engineering guy told me to make this screw 5 bits not 6 bits.**”

Barriers: Time and resources

I never received my pdf! I want a refund or immediate emailing of it!

.. And guess what. You forgot to put me in that too. Honestly I know that you're getting a lot of smoke blown up your ass for making such a great book. But from my perspective you totally suck.

Collective Incubators

Systems using networked computing and communication technology to support innovation

Treat people as if they were what they ought to be, and help them become what they are capable of being.
